

Auslite

coffin & ledger

handling gantry

Austeng in conjunction with Lite Industries have developed an optimum and safe way of lowering coffins into graves, especially when needing to dip during lowering over a monument.

The use of the gantry minimises risk of injury to funeral directors, cemetery staff, and family members with the process also being seen as more respectful.

One of the many additional applications of the system is safely lifting and repositioning ledgers before and after interment, exhumation and attaching safety harnesses to staff when they are working in graves.

As well as meeting all relevant National Lifting Codes and safety regulations the gantry is aesthetically pleasing and can come in a variety of finishes.

The premier engineering providers to the industry

We also supply engineering solutions to the crematoria industry. Our current range of equipment includes Cremation Furnaces, Automated Charge Biers, Catafalques, Transfer Trolleys, Mausoleum Shutter Handling, Interment Devices, Transfer Vans and more.
